

WINGSPAN

An options agent that mostly says no.

A DEVELOPER POINTS A LANGUAGE MODEL AT AN ALPACA ACCOUNT

It will always find a trade. It never says no, and it **can't count contracts.**

So we split the job.

THE MODEL ANSWERS ONE QUESTION

T · bearish · conviction **0.70**

“Extended run into resistance on thin volume. Sell the premium.”

CODE DOES EVERYTHING WITH A DOLLAR SIGN

Strike 0.15 to 0.30 delta · 30 to 45 days

Size hard cap \$3,000

Exit 50% profit · 2× stop, confirmed twice · 21 days

Order official Alpaca CLI

Then the idea has to survive the rails.

Five gates

Any one can stop it. None can be loosened by config or by the model.

Conviction ≥ 0.60

One position per name · 3 spreads max

\$3,000 cap per position

Strike rules · 0.15 to 0.30 delta · 30 to 45 days

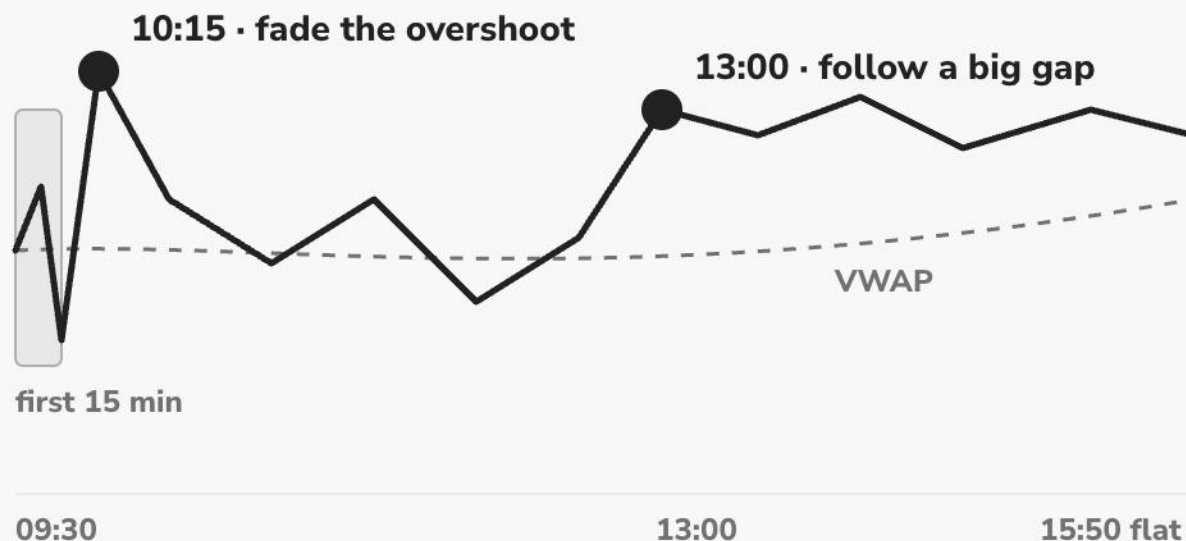

Liquidity: unwind cost $< 1.5\times$ credit

rejected

Most ideas die here. On purpose.

The second engine trades shares. No AI in it.

SPY and QQQ

shares only

10:15 fade

13:00 gap follow

\$20,000

per trade

0.7% stop

out after 120 minutes

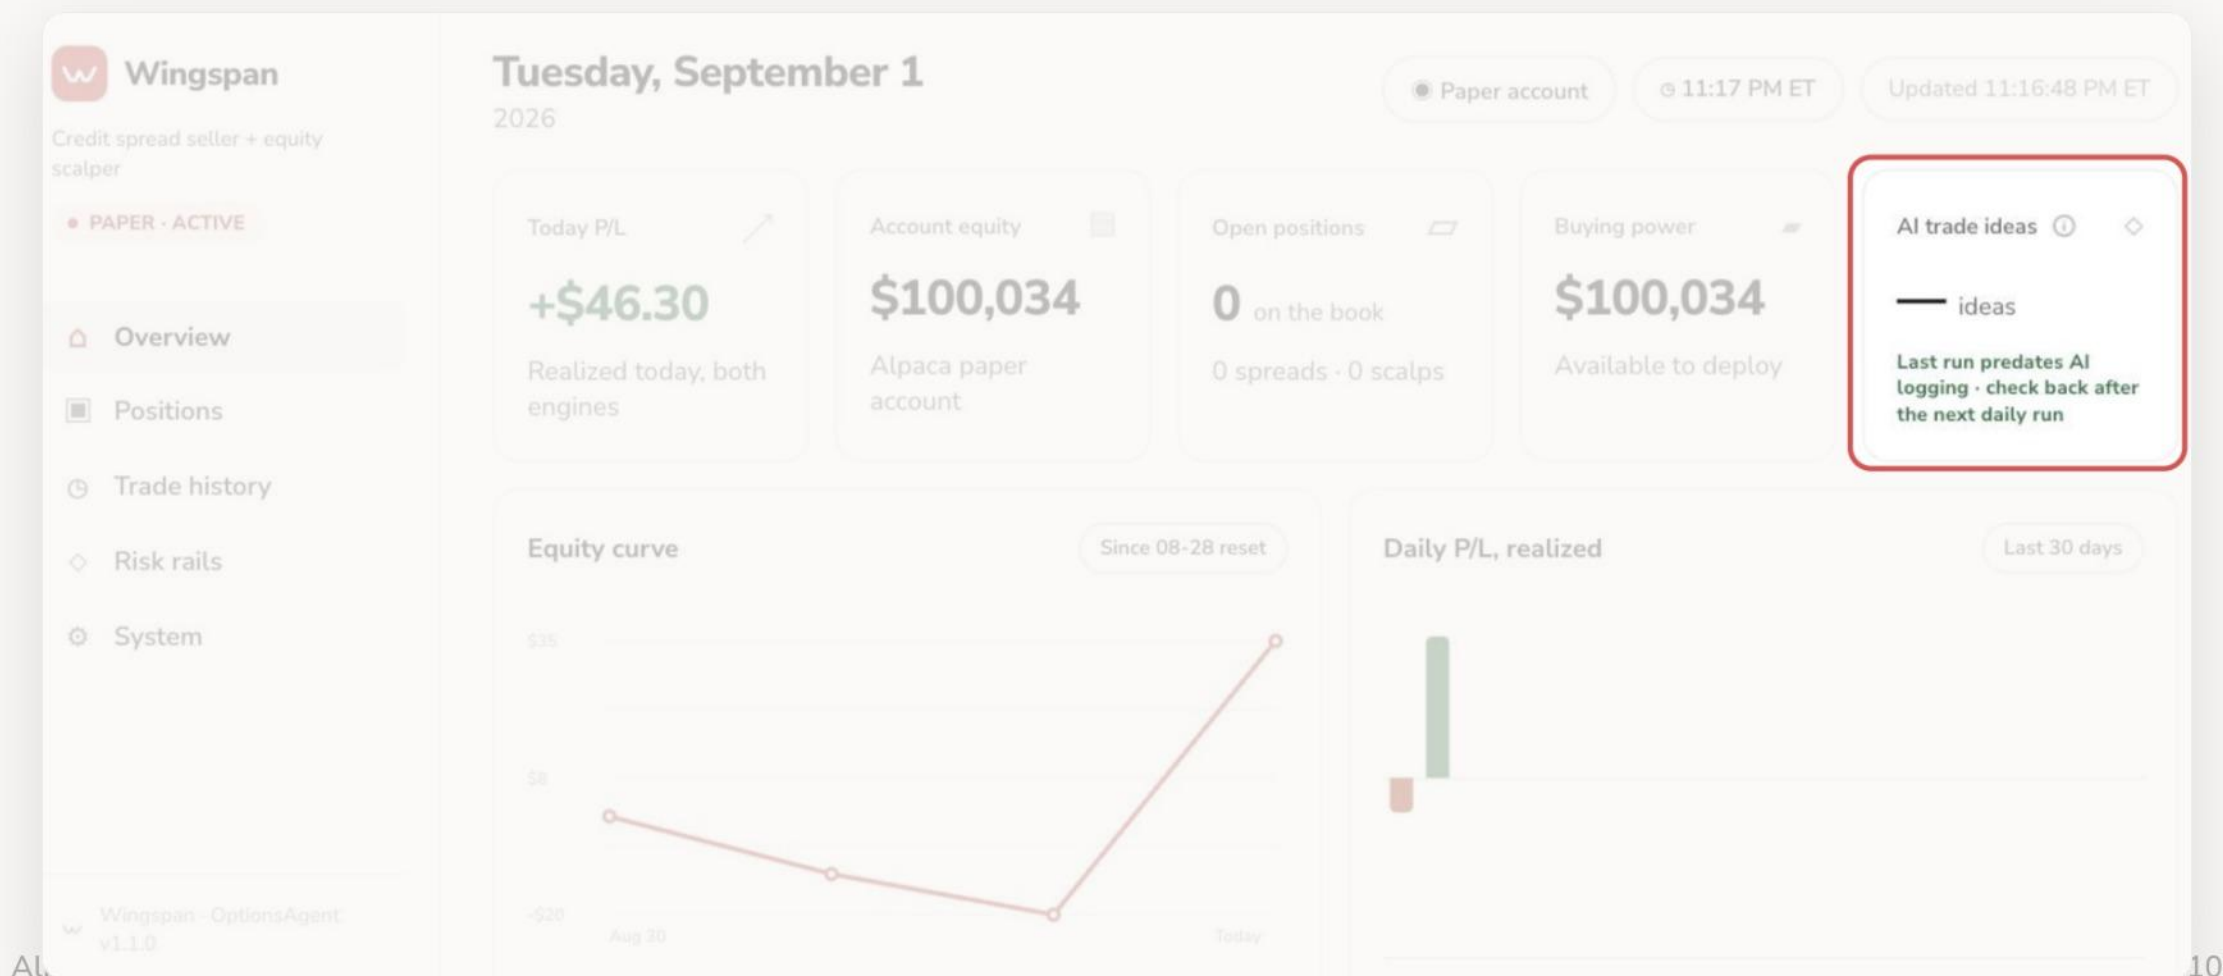

2 trades a day

\$300 daily halt

Flat by 15:50

same CLI, same journal

The live app. Both engines, one book.

That \$3,000 comes from the same function the bot calls.

Risk rails

Every gate below is hard-coded in Python. The AI only proposes; these rails decide, and they can be tightened by environment but never loosened.

← Overview

Credit spread seller	
Engine	Enabled
Runs	Once a day, 10:15 ET, weekdays
AI proposer	deepseek · deepseek-v4-pro
Strategy phase	Credit Spreads Only
Minimum conviction	60%
Max open option legs	6
Max per position	\$3,000

Every order goes out through Alpaca's own CLI.

...

```
$ alpaca order submit --order-class mleg --qty 15 --type limit --limit-price=-0.28 --time-in-force day --legs ' [{"symbol":"T261002C00030000","side":"sell","ratio_qty":"1"}, {"symbol":"T261002C00032000","side":"buy","ratio_qty":"1"} ] '
```

```
{
  "id": "1c9e...a4f2", "client_order_id": "oa-4dacc2da-8f31c0e2",
  "order_class": "mleg", "status": "accepted", "legs": 2
}
```

```
data/cli_calls.jsonl · {"argv":["alpaca","order","submit",...],"ok":true,"exit_code":0,"ms":171}
```

If the CLI fails, nothing opens.

We replayed a day of real option chains first.

23 spreads the open gate would have taken

0

past the stop

8 were already past their own stop on the quotes they were picked from.

With the liquidity floor: 5 admitted, 0 past the stop.

276 tests · replay of the Sept 1 chain snapshots

Every idea and every no is on the dashboard. Go check it.
