

WINGSPAN

An options agent that mostly says no.

CUSTOMER: A DEVELOPER POINTING AN LLM AT AN ALPACA ACCOUNT

Give a language model a brokerage account and it will always find a trade.

It never says no, and it can't count contracts.

178

contracts on **one idea**. Our first dry run, \$100k paper account, before the cap.

So we split the job.

THE MODEL ANSWERS ONE QUESTION

T · bearish · conviction **0.70**

“Extended run into resistance on thin volume. Sell the premium.”

CODE DOES EVERYTHING WITH A DOLLAR SIGN

Strike 0.15–0.30 delta · 30–45 days

Size hard cap \$3,000

Exit 50% profit · 2× stop · 21 days

Order official Alpaca CLI

Then the idea has to survive the rails.

Five gates

Any one can stop it. None can be loosened by config or by the model.

Conviction ≥ 0.60

One position per name · six slots

\$3,000 cap per position

Strike rules · 0.15–0.30 delta · 30–45 days

Liquidity: unwind cost $< 1.5\times$ credit rejected

Most ideas die here. That's the point.

The live app. A no is logged like a fill.

Drawn from the same function the bot runs.

Risk rails

Every gate below is hard-coded in Python. The AI only proposes; these rails decide, and they can be tightened by environment but never loosened.

← Overview

Credit spread seller	
Engine	Enabled
Runs	Once a day, 10:15 ET, weekdays
AI proposer	deepseek · deepseek-v4-pro
Strategy phase	Credit Spreads Only
Minimum conviction	60%
Max open option legs	6
Max per position	\$3.000

Every order goes out through Alpaca's own CLI.

...

```
$ alpaca order submit --order-class mleg --qty 15 --type limit --limit-price=-0.28 --time-in-force day --legs '[{"symbol":"T261002C00030000","side":"sell","ratio_qty":"1"}, {"symbol":"T261002C00032000","side":"buy","ratio_qty":"1"}]'
```

```
{  
  "id": "1c9e...a4f2", "client_order_id": "oa-4dacc2da-8f31c0e2",  
  "order_class": "mleg", "status": "accepted", "legs": 2  
}
```

```
data/cli_calls.jsonl · exit 0 · 214 ms · fail-closed, no backup path
```

We replayed a day of real option chains first.

22 spreads the old gate would have opened

8 were already past their own stop on the quotes they were picked from.

With the liquidity floor: 5 admitted, 0 past the stop.

276 tests · replay of the 2026-09-01 chain snapshots · seven mutation checks

Every idea and every no is on the dashboard. Go check it.
